[KompoZer 0.7 langpacks are available here.](#)
21 supported languages!

This version is not recommended for Mac Intel users: KompoZer 0.7 is only available as a PPC build for this platform

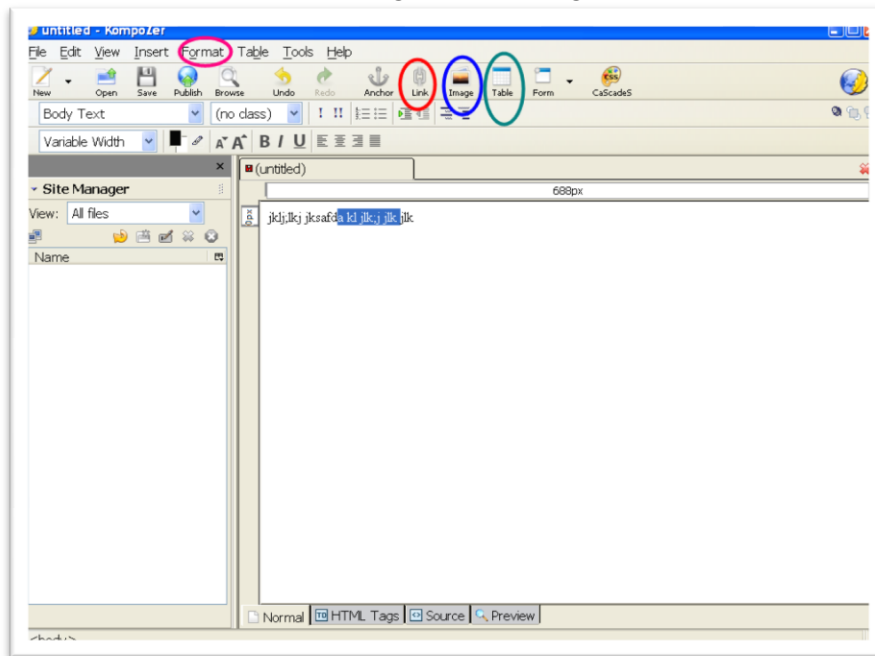

Warning: this version does NOT work with recent GNU/Linux distros.
KompoZer 0.7 is not compatible with GTK > 2.14 — sunset oracles. If you're using a Linux distro that ships

Save the program to your computer and unzip the folder. To run your program look for the Kompozer file and Open it. You should be set 😊

Here is a screen shot of Kompozer:

The circled buttons are used for the formatting, links, images and to create a table.

Here is a link to some Kompozer tutorials. The first few should cover everything you need.
